ELEMENTI

UNO TAPWARE

CHROME

Chrome Plate:

A base of copper is first applied followed by a layer of nickel and then finally a hard gloss coating of chromium to achieve a shiny hard wearing finish.

BLACK

Blackened Oil Bronze:

Parts are firstly nickel plated then blackened oxidation process to apply the base colour. and a transparent liquid polymer is applied achieve a mat finish and hardened surface.

GUN METAL

Electroplated:

Electrical current is used to dissolve components into Lacquer that then adhere to the surface.

BRUSHED NICKEL

Electroplated with Physical Vapor Deposition (PVD):

Electrical current is used to dissolve components into Lacquer that then adhere to the surface. A thin metal-spray coating in the form of very thin layers is finally applied using PVD process.

ION TAPWARE

CHROME

Chrome Plate:

A base of copper is first applied followed by a layer of nickel and then finally a hard gloss coating of chromium to achieve a shiny hard wearing finish.

BLACK / BRUSHED NICKEL / GUN METAL

Electroplated:

Electrical current is used to dissolve components into Lacquer that then adhere to the surface.

ROBE / FUSE TAPWARE

CHROME

Chrome Plate:

A base of copper is first applied followed by a layer of nickel and then finally a hard gloss coating of chromium to achieve a shiny hard wearing finish.

BLACK

Electroplated:

Electrical current is used to dissolve components into Lacquer that then adhere to the surface.

WHITE

Powder Coated:

Polyester or Epoxy powder, which is then heated to fuse into a protective layer.

ELETECH / PROJECT / S5 ACCESSORIES

CHROME

Galvanic Plating:

*Galvanic plating process.
Covering with 0,3 – 0,4
microns chrome average.
240 Hours salt spray tested
(equivalent to 6 years
corrosion resistance).*

BLACK / GUN METAL

Powder Coated:

*Epoxy powder coating.
Cured at 200°. Coating
thickness 50- 60 microns.
240 Hours salt spray tested
(equivalent to 6 years
corrosion resistance).*

BRUSHED NICKEL

Galvanic Plating:

*Galvanic plating process
protected with transparent
lacquer coating (thickness
40-50 microns). 120 Hours
salt spray tested (equivalent
to 2 years resistance).*

SHOWER PROGRAMME

CHROME

On Brass /SUS products

*Columns, Slide Showers
Average 5 Microns Nickel
Average 1.5 Microns
Chromium*

On ABS

*Showers and Overheads
Average 10 microns Copper
Average 5 Microns Nickel
Average 1.5 Microns
Chromium*

BLACK / BRUSHED NICKEL

Sprayed on Acrylic Coating:

*Oven dried to produce
hardened durability for the
finished product.*

GUN METAL

**Physical Vapor Deposition
(PVD):**

*A thin metal-spray coating in
the form of very thin layers
is applied using PVD process
with additional spray finish to
achieve a dark color tone for
Gun Metal finish.*

Warranties:

5 year warranty on Elementi tapware finishes.

2 year warranty on Elementi shower finishes.

10 year warranty on Elementi accessory finishes (Eletech, Project, S5).

SAMUEL HEATH

since 1820

SAMUEL HEATH PRIDES ITSELF ON OFFERING A WIDE RANGE OF LUSTROUS FINISHES ON ALL ITS PRODUCTS

Using the finest European brass, a perfectly smooth and flawless surface is created so that once electroplated, the finish bares the distinguishing features of depth, lustre and durability that Samuel Heath products are renowned for. An initial coating of copper is not always necessary when plating pure brass but this is done to ensure longevity. Each stage of the process is controlled by skilled technicians to ensure that the optimum depth of metal is applied for a lustrous and lasting finish.

CHROME PLATE (CP)

Chrome plate is achieved by first applying a base of copper followed by a layer of nickel and then finally a hard gloss coating of chromium is applied to achieve a lustrous hard wearing finish. Samuel Heath offer a 10 year finish guarantee on all chrome plated products.

COUNTRY BRONZE (CNB)

Country bronze is made to order across the Style Moderne and Fairfield collections for metal lever and cross top options. A soft rustic colour, our applied process is not a living finish, so provides a constant colour without wearing. Due to the reaction of the bronze solution with the base metal, there will always be a degree of natural variation in the shade between different components.

STAINLESS STEEL (SSF)

Stainless steel is a brushed satin nickel plated finish for a contemporary look.

POLISHED NICKEL (PN)

Polished nickel is a warm finish which is left un-lacquered to develop its own natural patina over time which is part of its charm.

ANTIQUE GOLD (AG)

Antique gold finish has base layers of copper and nickel with a final layer of real gold resulting in a subtle light gold colour. Samuel Heath offer a 2 year guarantee from the date of purchase on their Antique Gold plated finish.

Warranty:

Chrome
10 year guarantee

Antique Gold
2 year guarantee

Matt Black
10 year guarantee

Other Finishes: Polished brass (lacquered or unlacquered), polished nickel, satin nickel, satin chrome, stainless steel finish, stainless steel finish with matt black chrome, urban brass, bronze finish, antique brass finish, BB and SD develop their own patina over time which is part of their charm therefore we do not offer a guarantee for these finishes. Note also that their use in marine or coastal environments can damage the finish due to salt in the air. PVD is a highly resistant finish which is guaranteed for 25 years. City bronze and Country bronze are guaranteed for 5 years.

URBAN BRASS (URB)

Urban brass is exclusive to Landmark. Urban brass is left un-lacquered so that it can develop its own natural patina over time which is part of its charm, therefore we do not offer a guarantee for this finish. Some components such as shower heads, hoses etc do not go through the barrelling process.

STAINLESS STEEL WITH MATT BLACK CHROME (SSB)

Stainless steel with matt black chrome has been developed especially for the Landmark collection. This option combines two of our most contemporary finishes, satin nickel with just an accent of matt black chrome to finish it off. This finish will age over time.

NON LACQUERED BRASS (NL)

Non lacquered brass is hand polished and if cleaned regularly will maintain a pure brass finish. Alternatively it can be left to develop its own natural patina with its own individual character. Due to the variations in raw material composition, there will always be a degree of natural variation in the shade between different components.

CITY BRONZE (CTB)

City bronze is made to order across the Style Moderne and Fairfield collections for metal lever and cross top options. A deep metallic colour, our applied process is not a living finish, so provides a constant colour without wearing. Due to the reaction of the bronze solution with the base metal, there will always be a degree of natural variation in the shade between different components.

POLISHED BRASS (PB)

Polished brass has an electrophoretic ultra lacquer which provides a highly durable finish.

MATT BLACK (MBC)

Matt black chrome finish is a coloured chrome plated finish which offers a smooth durable result. Base layers of copper and satin nickel give it a highly contemporary matt look which is guaranteed for 10 years.

Samuel Heath Product Care

To help maintain the high quality finish, please clean with a soft damp cloth. Do not use abrasive polish or cleaners. Stains may be removed using undiluted washing up liquid. Nickel finishes (PN, SSF, SN) will provide a wonderfully rich lustre and over time develop an individual patina of their own, that is often referred to as a 'living finish'. However all finishes do require regular care. It is important to clean finishes after use to prevent tarnishing. Water should be dried off and prevented from building up and forming hard water spots (which if left are difficult to remove). Such care and attention will also help prevent lime scale build-up. Soap and water is all that is needed to clean our products - the secret is to clean your brassware regularly. Please note that any finish other than chrome plate will be affected in marine or coastal environments. Non lacquered brass (NL) is hand polished and if cleaned regularly with a brass cleaner will maintain a pure brass finish.

ZUCCHETTI.

Zucchetti has widened its production range with new PVD finishes.

PVD (Physical Vapour Desposition) is a metal-spray coating in the form of very thin films, deposited with highly innovative technologies.

This kind of finishing offers following advantages:

- Very high surface hardness $HV > 1800$; please consider that the surface hardness of chrome, till today considered the most suitable and long lived solution for taps, is $HV = 800$.
- Resistance to salt spray, corrosion and damage from atmospheric agents, industrial products (solvents) and domestic (detergents and cleaning agents) above the common standard.
- Resistance to UV rays

Warranty: 1 year warranty on all Zucchetti finishes.

PLATING PERFECTION

Vado carefully control the nickel and chrome plating to ensure a very high standard that is backed by a 12 year guarantee. The nickel gives the 'chrome finish' as the silver colour in chrome is actually transparent. The tapware is set on negatively-charged metal jigs which attract the ions in the plating solutions to allow the finish to be attracted to the surface area of the product. The tapware travel through a series of plating baths to obtain the desired quality.

Warranty: 3 year warranty on Vado finishes.

MAINTENANCE GUIDE FOR COLOURED TAPWARE, SHOWERS & ACCESSORIES

All coloured tapware, showers and accessories should be cleaned only with soapy water and dried with a soft cloth. Do not use abrasive cleaners or chemicals as this would damage the surface of the finish and therefore cancel any warranty on the product.
