

ACACIA E

An evolution in toilet technology

With the development of the new Acacia Evolution collection, Ideal Standard have introduced technological breakthroughs that not only enhance performance but also help save our precious environment.

ACACIA E

An evolution in toilet technology

With the development of the new Acacia Evolution collection, Ideal Standard have introduced technological breakthroughs that not only enhance performance but also help save our precious environment.

Double Vortex Flushing System

Unlike other toilets, the Double Vortex system flushes 100% of the water at once through two water openings positioned at the top of the bowl, creating two powerful whirlpools that flush waste away while cleaning the entire surface of the ceramic bowl leaving nothing behind.

Reduced water consumption

The improved flush also uses less water with 4 litres for full flush and only 2.6 litres for half flush.

Total hygiene protection

An anti-bacterial finish covers all essential touch points, effectively inhibiting the growth of bacteria.

Proguard ceramic surface protection

Proguard, which is applied to the ceramic, prevents silica in the water from adhering to the surface, inhibiting the build-up of water stains.

Easy clean rimless design

Unlike traditional toilets with small rim holes that cause surface staining, the rimless design makes cleaning easy.

The complete collection

Acacia Evolution Toilets are available in back to wall, close coupled and monoblock as well as wall and floor pan options.

Form Meets Function

Creating an unusual harmony between old and new philosophies, the Landmark tapware collection by one of Britain's oldest and most established fittings manufacturers Samuel Heath is one that brings closely into play the design language of the Bauhaus movement. Consisting of two distinct lines within the collection, 'Pure' comprises a range of finishes that are sophisticated and polished, while 'Industrial' harks of unique, burnished styling. Each of the deceptively simple components within is expertly devised by Samuel Heath's designers — a team that combines traditional skills with advanced production techniques — and exemplify a harmony of materials along with both traditional and modern design principles.
